

LRGC News and Reviews!

- The LRGc now provides the Affymetrix 10K, 100K and 500K Mapping (SNP) arrays for genotyping experiments and Human Exon arrays for whole transcription profiling.
- New expression arrays: Rhesus, Medicago, Tomato, Sugar cane, Maize, Rice, Chicken, and Porcine.
- We have also adopted the new GeneChip Two-Cycle labeling protocol for use with 25 – 100 ng of starting total RNA.

In an effort to better serve our scientific community we are sending out this questionnaire. We value you as a customer and would appreciate your comments on the following.

Thank you in advance for your time.

How would you rate our service?

___ Excellent

___ Good

___ Satisfactory

___ Unsatisfactory

What did you like about the service provided at the LRGc Microarray Facility?

What aspects of our service can be improved upon?
